

Emmett Township Loop Water Transmission Main

**CHOOSE
MARSHALL**

Investment in water and wastewater infrastructure expansion is crucial for the health of our community as well as ongoing efforts to protect our lakes, rivers, and streams.

The Emmett Township Loop Water Transmission Main begins with a 20-inch diameter pipeline on Verona Road just east of Raymond Road. The main extends along Verona Road, making a connection with the Verona Loop Water Transmission Main (Project 8).

The new water transmission main will supply water from the City of Battle Creek through Emmett Township to the Project 8 transmission main. The combination of Project 7 and Project 8 will supply up to 5 MGD of water from the City of Battle Creek to the Marshall Facilities Site augmenting water supply from the City of Marshall. The combined sources of municipal water will be stored in a Ground Storage Tank (Project 2) and pumped to the BlueOval project and future customers in the MAJOR campus.

Key Project Features

- ◆ **3.4 Miles of 20-inch water transmission main along Verona Road.**
- ◆ **Deliver up to 5 million gallons per day (MGD) of water to the MAJOR Campus.**
